

Monitoring Service

We offer a computer system and network monitoring package that actively watches your internet connections and servers for any signs of trouble. This reduces the time it takes to react to emergencies and notifies you of problems sometimes before you even know there is a problem.

Packages starting at only \$29.99/month for 5 devices.

Real world examples for this service:

Monitor your internet connection and see how often you're offline as well as quality of service problems.

Monitor your website to make sure it's always up and available to customers.

Monitor the CPU usage on your server to make sure nothing is slowing your server down.

Monitor the hard drive capacity to make sure your never left without room and no warning.

Watch the temperature in your server to make sure it isn't overheating.

Watch the fan speed in your server so make sure the cpu fan doesn't die and ruin your server.

Monitor how many users are logged into your server.

Monitor your internet bandwidth usage both in and out of your network.

Monitor your VoIP phones to make sure they're up and working.

Watch the networked Xerox machine to make sure it's up and running.

Make sure the company FTP server is alive and well.

Assure the company email server is up and running with no problems.

Get instant notification of down servers or services. Get instant notification of failing servers or services. Be aware of the problem before your clients are!
